

## Units and Equivalences

<u>Customary System</u>	<u>Metric System</u>
<b>Length</b> <p>12 inches (<i>in</i>) = 1 foot (<i>ft</i>)              3 feet (<i>ft</i>) = 1 yard (<i>yd</i>)              5280 feet (<i>ft</i>) = 1 mile (<i>mi</i>)</p>	<b>Length</b> <p>10 millimeters (<i>mm</i>) = 1 centimeter (<i>cm</i>)              100 centimeter (<i>cm</i>) = 1 meter (<i>m</i>)              1000 meter (<i>m</i>) = 1 kilometer (<i>km</i>)</p>
<b>Mass (weight)</b> <p>16 ounces (<i>oz</i>) = 1 pound (<i>lb</i>)              2000 pound (<i>lb</i>) = 1 ton (<i>T</i>)</p>	<b>Mass (weight)</b> <p>1000 milligrams (<i>mg</i>) = 1 gram (<i>g</i>)              1000 grams (<i>g</i>) = 1 kilogram (<i>kg</i>)              1000 kilogram (<i>kg</i>) = 1 metric tonne (<i>mT</i>)</p>
<b>Volume</b> <p>3 teaspoons (<i>tsp</i>) = 1 tablespoon (<i>Tbsp</i>)              16 tablespoons (<i>Tbsp</i>) = 1 cup (<i>c</i>)              8 fluid ounces (<i>fl oz</i>) = 1 cup (<i>c</i>)                2 cup (<i>c</i>) = 1 pint (<i>pt</i>)              2 pint (<i>pt</i>) = 1 quart (<i>qt</i>)              4 quart (<i>qt</i>) = 1 gallon (<i>gal</i>)</p>	<b>Volume</b> <p>1000 milliliters (<i>mL</i>) = 1 liters (<i>L</i>)</p>

### Time

60 seconds (*sec*) = 1 minute (*min*)

60 minute (*min*) = 1 hour (*hr*)

24 hour (*hr*) = 1 day (*day*)

365 day (*day*) = 1 year (*yr*)

The metric system is nice because you can just use the prefix (first part) of each word to determine the number of places to move the decimal because everything is a power of 10.

If you are moving to a prefix on the right move the decimal to the left

If you are moving to a prefix on the left move the decimal to the right

Kilo	Hecto	Deca	Meters Liters Grams 1	Deci	Centi	Milli
1000	100	10		0.1	0.01	0.001
